I have a component that exports an abstract component with some abstract properties. And this abstract component is exported too. export abstract class MyComponent{ protected abstract parent: MyComponent; public myId: number = 0; protected computed: any; public getMyId(): number { if (this.myId === undefined) { this.myId = 0; } return this.myId; } } export interface MyComponent { parent: MyComponent; } export class MyComponentWithParent extends MyComponent{ parent: MyComponent; } In my case, it looks like a child, so I use @vue/component: import Vue from "vue"; import MyComponentWithParent from "./MyComponentWithParent.vue"; export default Vue.extend(MyComponentWithParent); But, when i trying to use it in another component I have this error: Compiler Error: ./src/components/MyComponent.vue Line 5: Property or method "parent" is not defined on the instance but referenced during render. Make sure to declare reactive data properties in the data option. OR make sure to declare "parent" in the created or mounted hook OR if you are using create-react-app, you need to add a "displayName" field to your. I guess that 2d92ce491b
